

CloudSync Pro — Frequently Asked Questions

Q: What is CloudSync Pro?

A: CloudSync Pro is a file synchronization service that automatically backs up and syncs files across all your devices in real time. It supports Windows, macOS, Linux, iOS, and Android.

Q: How much storage do I get?

A: The Basic plan includes 100GB of storage, the Pro plan includes 1TB, and the Business plan includes 5TB with the option to purchase additional storage in 1TB increments.

Q: Is my data encrypted?

A: Yes. All files are encrypted using AES-256 encryption both in transit and at rest. CloudSync Pro uses a zero-knowledge architecture, meaning even our own servers cannot read the contents of your files without your encryption key.

Q: Can I recover deleted files?

A: Deleted files are moved to a recovery bin and retained for 30 days on the Basic plan, 90 days on the Pro plan, and 180 days on the Business plan. After this period, files are permanently deleted and cannot be recovered.

Q: What happens if I exceed my storage limit?

A: If you exceed your storage limit, file syncing will pause until you either free up space or upgrade your plan. Existing synced files remain accessible; only new uploads are affected.

Q: How do I share files with team members?

A: You can share individual files or entire folders by generating a shareable link, or by directly inviting a team member's email address for collaborative access with configurable permission levels (view-only, comment, or edit).

Q: Does CloudSync Pro offer version history?

A: Yes. The Pro and Business plans retain up to 180 days of version history for every file, allowing you to restore any previous version. The Basic plan retains 30 days of version history.

Q: What is the pricing for the Business plan?

A: The Business plan is priced at \$12.99 per user per month when billed annually, or \$15.99 per user per month when billed monthly. It includes a minimum of 5 user seats.
